FHA Members Here Honored

The Appomattox Chapter of the Virginia Association, Future Homemakers of America, received the Outstanding Chapter Award June 21. This state award was made at the morning session of the sixteenth annual FHA convention, which is meeting at Hotel Roanoke, Roanoke, Va.

The Appomattox Chapter received this award for its excellent program of work which contributed to the growth and development of each of the chapter members, for the achievement of its members in homemaking activities, school and community services, leadership and public relations.

The chapter selected as its outstanding project this year: "Food for Family Fitness." At the beginning of the year a survey was made to determine what work was needed to be done.

Miss Sandra Saunders, representing the 96 members of the Appomattox Chapter, accepted the award. Mrs. Madeline Thomas and Mrs. Lucy Green are the chapter Advisers.

ANOTHER BIG REASON BEHIND THE BIG BOOM IN FORD SALES
Galaxie styling is inspiring more admiration (and imitation) than any other car on the road!

This is the look that started with Thunderbird—aired the Galaxie—and quickly became the styling success of the Sixties.
Many cars have tried to copy it. No car has succeeded. Incomparably beautiful, the 1961 Galaxie maintains its distinction—as originals always do.
Styling is only part of Galaxie's distinction: this is the car that's beautifully built to take care of itself. The '61 Ford goes 30,000 miles between chassis lubrications . . . 4,000 miles between oil changes. Brakes adjust automatically. The muffler is built to last three times as long as ordinary ones. The body is specially treated to resist rust and corrosion. The finish never needs waxing.
Wouldn't it make sense to STOP spending money on an old car that can never do for you what a new Ford can do?

Not The Same

My wife has been bragging that she has been married to the same man for seventeen years. That's not so. I haven't been the same man since the first year. —Covington, Ky., Dispatch.

RESEARCHERS REPORT ON SUCKERING TOBACCO

Research by the U. S. Department of Agriculture and certain States Experiment Station had brought a summary statement a bout the effect of maleic hydra zide (MH-30) on tobacco. The four-page summary is being mailo to all growers of cigarette tobacco in Virginia by County Agricultural Extension Agents.

A detailed 52-page report is available at county offices, also for those who wish to study it.

Comparing leaf from treated to bacco with that from hand-sucker ed tobacco, the research indicate that:

1. Leaf experts preferred, in most instances, hand-suckered fluecure tobacco, but showed no preferenc in Burley and Maryland tobacco.

2. Hand-suckered tobacco had bet ter chemical and physical proper ties, especially filling power.

3. Treated tobacco was most difficult to mak into cigarettes

4. Expert smoking panels prefer ed hand-suckered tobacco over early treated tobacco, but showed n preference if tobacco was treate at full flower or later.

5. Chemical sucker control save labor and increases per acre yield

This summary report also discus ses some possible economic im plications. It is pointed out tha in addition to suckering method other production practices, such a rates of fertilization, spacing irrigation, harvesting and curing affect tobacco quality.

Since other cultural practices, in addition to the use of MH-30 and the exact method of applying the chemical for sucker control can affect tobacco quality, mor research is needed on this problem County Agent Jim Smith observes

He who has lost honor can lose nothing more. -Publilius Syrius.

No man sacrifices his honor, even for one he loves. —Henrik Ibsen.

KNOW THE WEATHER

By E. H. Sims

What is the significance of the closeness of the lines on the weather maps?

When the lines on the weather map in your newspaper are close together (these lines are isobars) that means pressure changes are great. Isobars are merely lines connecting points on the map which have reported the same barometric pressure.

If the pressure differential is great, even over a short distance, winds, and probably stiff ones, are sure to be encountered. That means for all practical purposes, that the top of the great layer of gases surrounding the earth is extremely hilly, so that air rushes from high peaks into the valleys nearby, at great speed.

This speed, or wind velocity, causes heavy wind. If the incline is not steep—the lines (or isobars) not close togethern then will flow more slowly, down a more gradual incline at the top of the layer of gas above you.
